Gasket Attachment Instructions for Orange Micro® USB Card

The following instructions describe how to attach an EMI gasket to an Orange Micro USB card. This USB card is used in graphics systems that require a USB keyboard and mouse.

To attach the EMI gasket, you need the following items:

- One Orange Micro USB PCI card (P/N 9210286)
- One gasket (P/N 042-1243-002)
- USB type A cable(s)

Before the gasket can be attached to the USB card, the card must be installed in your system. For instructions on how to install the Orange Micro USB card, see the PCI card installation section of your system user's guide.

To attach the gasket, follow these steps:

1. Insert the USB type A cable connector(s) into the appropriate cutout(s) of the gasket, as shown in Figure 1. Make sure that the orientation of the connector is in the correct position to mate with the connector on the USB card.
2. With the pointed end of the gasket positioned to the left, insert the USB type A cable connector(s) into the mating connector(s) on the USB card.

   The gasket is held in place by the USB type A cable connector(s).
